

This notice provides insight and relevant information to simplify communication during severe weather. With effective communication, we can restore power and overcome outages and damage from severe weather more effectively.

Working together and providing products to help restore power during severe weather is a primary focus for FSI.

Inventory and orders are managed based on weather risk levels. "Storm Orders" take priority when necessary and we apply available assets to urgent situations. We are committed to working around the clock if necessary, to support efforts until an urgency has subsided.

FSI "readiness" mimics the Severe Weather Risk Categories.

Operations are normal. FSI expects minor storms, isolated outages, and/or major equipment/line outage. Local stock is governed by FSI customers and their networks to restore power. Orders ship from ordinary inventory.

Major storms are forecasted and FSI is on alert for isolated and major outages. We encourage customers to double check inventory levels. FSI anticipates that our normal stocking levels will be sufficient to handle all orders and we will continue operations as normal. When asked, we expedite open orders to ship ahead of storm predictions. FSI production is anticipating and preparing to receive a surge of significant storm orders.

At this level, major storms are in progress and widespread outages have occurred. Typically significant "Storm" orders are shipping. Storm orders requirements are monitored and normal orders are released only if we are assured doing so will not interfere with storm orders. There is higher potential that product ordered for areas outside of the storm may be delayed.

Emergency Contacts & Territory

FSI monitors weather and utility outage reports and elevates readiness levels accordingly. Communication, both internally and externally occur as readiness levels change.

Dedicated Inventory

FSI maintains dedicated "Storm Emergency" inventory of BMK critical restoration products. The dedicated products are specifically set aside for utility needs during storm emergencies when immediate high volume material needs are anticipated. Additionally, when a major storm is imminent, we set aside regular inventory as potential storm material.

Availability

Storm inventory is available on a first-come first-serve basis. However, to ensure that storm inventory ships to the area(s) in critical need, FSI reserves the right to determine when and where to make material available.

24/7 Manufacturing

FSI will dedicate production capability toward manufacturing storm orders during a major event. We will operate 24/7 as needed to manufacture products for emergency power restoration. Availability may depend on raw material supply chain.
